

Styling in HTML

Overview

Styling on HTML elements can be done by using the **style attribute** and providing some specific values to it. Styling could be done on colour, font, text size etc.

Syntax : `<tagname style = " property : value ; ">`

- ❖ The property is a CSS property. The value is a CSS value. We will learn about CSS later.

Text Color

The CSS colour property is used to set the text colour for an HTML element.

Example : `<h1 style = " color : red ; ">Welcome to Coding ninjas !</h1>`
`<p style = " color : green; " > Let's start Learning </p>`

Browser :

Text Size

The CSS font-size property is used to set the text size for an HTML element.

Example : `<p style = " font-size : 30px ;"> Welcome to Coding ninjas !</p>`
`<p style = " font-size : 20px ;" >Let start Learning </p>`

Browser :

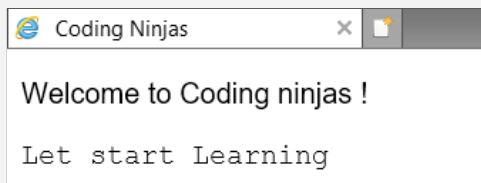

- ❖ You can see in the above example both of the paragraphs have different text sizes.

Fonts

The CSS font-family property is used to set the font to be used for an HTML element.

Example : `<p style = " font-family : sans-serif ; ">Welcome to Coding ninjas !</p>`
`<p style = " font-family : monospace ; "> Let start Learning </p>`

Browser :

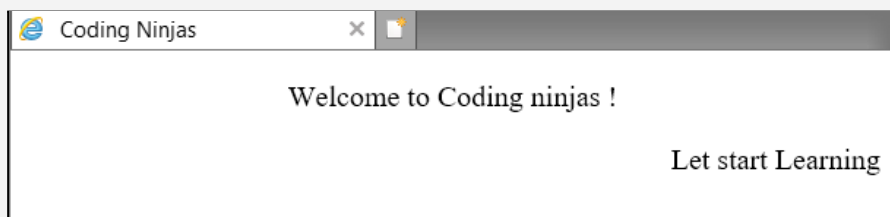

Text Alignment

The CSS text-align property is used to set the **horizontal text alignment** for an HTML element.

Example : `<p style = " text-align : center ; ">Welcome to Coding ninjas !</p>`
`<p style = " text-align : right ; "> Let start Learning </p>`

Browser :

Background Color

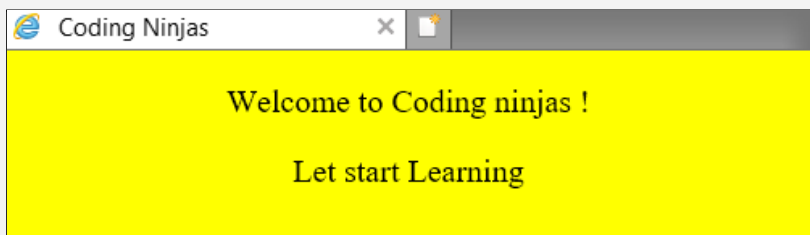

The CSS background-colour property is used to set the background colour for an HTML element.

Example : `<body style = "background-color: yellow ">`

`<p style = " text-align : center ; ">Welcome to Coding ninjas !</p>`

`<p style = " text-align : center ; "> Let start Learning </p>`

`</body>`

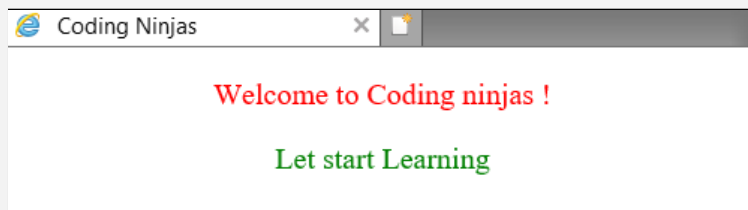

Browser :

Multiple styles

We can also merge the above styles and set the properties for them, and properties are separated by semicolons(;).

Example : `<p style = " text-align : center ; color: red ">Welcome to Coding ninjas !</p>`

`<p style = " text-align : center ; color: green "> Let start Learning </p>`

Browser :

- ❖ In the above example, we merged text-align and colour property for a p-tag.
